

HIRO SAKUNO

+55 47 99741-4451 — hirosakuno@gmail.com — [LinkedIn](#) — [Portfolio](#)

Education

FURB - Universidade de Blumenau

Bachelor's Degree in Civil Engineering

2023

Brazil

Experience

Anheuser-Busch InBev

Sep 2025 - Present

Senior BI Engineer & BI Architect — Data Analyst

- Supported SAP ECC to SAP S/4HANA table migration using Airflow, Databricks, SQL, and Python, enabling data transformation, validation, and integration with reporting solutions.
- Optimized Power BI semantic models using Tabular Editor 3 by removing unused measures, tables, and dependencies, improving report efficiency, maintainability, and migration readiness.
- Used OpenAI Codex and TMDL files to analyze Power BI report metadata, tables, relationships, dependencies, and business logic, supporting faster report mapping and migration from SAP ECC to SAP S/4HANA.

Sicredi

Sep 2024 - Sep 2025

Senior Power BI Developer — Data Analyst

- Implemented both Row-Level Security (RLS) and Object-Level Security (OLS) in Power BI semantic models using Tabular Editor 3, ensuring secure, role-based access to data across regions, business units, and sensitive reporting domains.
- Built Power BI dashboards and reports to track social program results across 3,600 schools in Brazil, providing stakeholders with clear visibility into program performance, coverage, and impact indicators.
- Worked with Oracle and PL/SQL packages to support ETL processes, business rule implementation, and data transformation routines, ensuring reliable data processing for analytics and reporting solutions.

Grupo NC

Apr 2023 - Sep 2024

Power BI Developer — Data Analyst

- Reduced Power BI capacity consumption by approximately 50% by optimizing the 10 heaviest reports using DAX Studio, incremental refresh, data model improvements, and ETL optimization.
- Developed Power BI solutions over datasets with 250M+ rows, using DirectQuery, optimized data models, and query reduction techniques to improve performance and usability.
- Improved data models, DAX calculations, and ETL processes to increase report performance, reduce resource consumption, and improve user experience.

Dato Tecnologia

Apr 2022 - Jun 2023

Power BI Developer — Data Analyst

- Developed BI solutions for an apparel manufacturing company, supporting collection planning based on material inputs and color availability, as well as management analysis through Power BI dashboards, SQL queries, and data transformation routines.
- Worked with SQL, Oracle, and Power Query (M) to extract, transform, and structure data from different sources, ensuring reliable datasets for analytics and reporting solutions.
- Standardized and parameterized Power BI reports used across 50+ accounting clients, improving report consistency, scalability, and delivery efficiency through reusable layouts, data models, and business logic.

Projects

Natural Language to SQL Chatbot

NL-to-SQL, Supabase, PostgreSQL, Pinecone

- Developed an NL-to-SQL chatbot integrated with website webhooks that converts natural language into SQL, executes queries in Supabase PostgreSQL, and combines relational results with embedded Pinecone vector retrieval to deliver grounded responses.

Resume AI Agent

Python, Agent Framework, file-based skills, Azure AI Foundry

- Built a Microsoft Foundry hosted agent that matches documented experience to target job descriptions and generates ATS-oriented resume output.

Certifications and Languages

Certifications: Microsoft Certified Power BI Data Analyst Associate (PL-300)

Languages: English (Professional), Portuguese (Native)
